COMMSCOPE®

Multiport service terminal series— the industry's workhorse

CommScope's history of innovation in fiber connectivity and material science has given the multiport service terminal (MST) series the reputation of the industry's access terminal workhorse. Designed and built with hardened connector technology, the MST series is factory-terminated and environmentally sealed, to withstand rugged outside plant environments. Plug-and-play connectivity ensures fast deployment and lower installation costs by eliminating time-consuming splicing.

The MST series offers four options.

The MST gives providers pole, pedestal, handhole, or strand mounting options, and is offered in two primary configurations: 4x3 or 2xN terminal bodies, each using full-size optical connectors.

- No splicing required in the terminal
- No terminal re-entry required
- Available with hardened full-size optical connectors with up to 12 ports
- 1:2, 1:4, or 1:8 splitter options
- Dielectric, toneable, or input stub cables
- Pole, pedestal, handhole, or strand mounting options
- Ships with universal mounting bracket
- User-friendly packaging allows for easy un-spooling
- Factory-sealed enclosure for environmental protection

CONFIGURATIONS

MST: full-size connectors

- 2xN style: 2, 4, 6, 8, or 12 ports
- 4x3 style: 4, 6, 8, or 12 ports

MST 2xN

MST 4x3

Fiber indexing terminals series—the next evolution in FTTx deployment

With innovative fiber indexing technology, the benefits of plug-and-play hardened connectivity are dramatically increased. Designed specifically for fiber indexing deployments, fiber indexing terminals (NDX) give providers pole, pedestal, or handhole mounting options, and are designed for quick and easy installation.

When deployed in a daisy-chain architecture, fiber indexing terminals have all the advantages of the access terminals portfolio—speed, flexibility, and density—plus, they save the network provider as much as 70 percent of their fiber cabling budget.

In fiber indexing, up to 12 terminals are daisy-chained in a series. This allows a fast and repeatable “cookie-cutter” approach to network design and deployment. The efficient modular design enables efficient, cost-effective connections for new subscribers and services, while allowing providers to take a pay-as-you-grow approach to FTTx deployment.

In a typical FTTx network, signals from the fiber distribution hub (FDH) travel “forward” from the first terminal to the last. When a second FDH cable is connected to the last terminal, the signal runs “backwards” toward the first terminal. Called “reversed

feed,” this technique makes additional fibers available, which providers can use to respond in a virtual instant to unforeseen demands for a wide range of revenue-generating services.

- No splicing required in the terminal
- No terminal re-entry required
- Available with hardened full size connector adapters with 4 and 8 ports
- Available with terminal only, 1:4, and 1:8 integrated splitters; or branching terminals
- Optional multi-use ports, with Index Only and Splitter terminals
- Available with 12 or 24 fiber
- Connector ports colored and clearly labeled for fast installation
- Dielectric input stub cables
- Ships with universal mounting bracket
- User-friendly packaging allows for easy unspooling
- Factory-sealed enclosure for environmental protection

FIBER INDEXING

Fiber indexing is the shifting of a fiber's position from one multifiber connector to another, within each terminal.

- 1 The process begins with a 12-fiber cable from the fiber distribution hub (FDH) entering the first index terminal.
- 2 Inside the terminal, the fibers divide and the signal from the fiber in the first position is routed to a 1:4 or 1:8 splitter for servicing local customers.

- 3 The remaining fibers are “indexed”—advanced one position in the order—then combined using a 12-fiber HFMOC.
- 4 The exiting 12-fiber hardened cable connects to the next terminal where the indexing process is repeated.

Flexible service terminal series—the ultimate option for difficult environments

CONFIGURATIONS

The flexible service terminal (FST) series is designed specially for fast, easy network connections in space-constrained environments. A small terminal unit attached to staggered-length connector cables gives installers maximum flexibility in the tightest, most challenging install situations. Hardened fiber stubs make for fast, reliable, plug-and-play distribution to customer premises. The FST's unique design also simplifies maintenance, as the flexible hardened adapter stubs are easy to clean and re-connect without removing the terminal from its installed position.

This factory-sealed terminal withstands harsh outside plant conditions, and is an ideal option for spaces such as handholes or congested pits where moisture is possible. The small unit's flexible structure gives technicians a wealth of install options—it's a simple solution that can reduce or even eliminate the costs of civil works and construction. The FST series consists of three options:

FST-T

The FST-T terminal features preconnectorized, hardened, full-size or miniaturized DLX single-fiber adapter drops and an HMFOC stub.

- No splicing required in the terminal
- No terminal re-entry required
- Output cables are grouped and staggered to distribute space consumption and minimize kinking
- Hardened adapter drops are configured in pre-defined lengths for easy identification and management
- Dielectric input cable with nylon jacket for termite protection
- Multiple mounting options

FST-T: full-size

- Single fiber drops
- Available on 2,4,6,8 and 12 drops
- Available with HMFOC stub or various-length stub tails for splicing
- Quick install to distribution cable with 12-fiber HMFOC interface or various-length stub tails

FST-T 12 Ports Full Size

FST-T 4 Ports Full Size

If you have design, installation, or troubleshooting questions, find prompt, expert support from a CommScope professional.

SUPPORT CENTER

Any application. Any configuration. One portfolio.

CommScope's family of optical termination enclosures (OTE) was specifically designed to streamline and speed the deployment of fiber while delivering long-lasting reliability and peace of mind. Composed of four OTE series, this portfolio was designed with an almost limitless choice for sizes, styles, and configurations to accommodate nearly every unique deployment need.

These robust enclosures feature pre-connectorized hardened adapter ports and are fully compatible with full size and Prodigy Adapters. They provide plug-and-play simplicity for deploying and managing fiber optic connections. They also offer a unique solution for splicing, termination, and pass-through cable requirements in FTTx architectures to facilitate deployment.

CONFIGURATIONS

Mini-OTE (OTE-300)

- 2, 4, 6, 8, or 12 Ports
- Stub or In-Line application
- Available with Prodigy or Full-Size adapter
- No Splitter, Splitter or TAP configurations.

OTE 8 Ports Prodigy

13 Hardened Terminals Solution North America Region

Specialty Terminals Adapters configuration

Commscope's Specialty Terminals offer different alternatives for adapters including the Full Size connector and, Prodigy universally compatible with multiple hardened fiber connectors as common features among all components.

BENEFITS

- **Pay as you grow:** Lower home passed cost, specially with lower take rates. HxT only installed when customer connections needed.
- **Flexibility:** All possible technologies combined in one ODN.
- **TAP:** Very similar to coax tap technology.
- **Indexing:** Perfectly adapted to index brownfields or new deployments.
- **Stubless:** Fewer SKUs on terminals.
