

UNIFIED VIDEO, ACCESS & SECURITY SYSTEMS

SECURING RETAIL BANKING

INNERRANGE.COM

ABOUT US

Inner Range is a manufacturer and integrator of unified Video, Access Control and Security solutions. Founded in Melbourne, Australia, Inner Range has over 35 years of innovation and has more than 150,000 systems deployed globally.

We manufacture end-to-end solutions from the card you badge at one of our readers to the controller securing the door, right through to the enterprise security management software monitoring multiple sites anywhere in the world. Our scalable products are suitable for high-end residential, commercial and enterprise sites across verticals such as education, healthcare, government and critical infrastructure.

66

We are passionate about empowering our customers to protect what they value most, their property, their possessions and most importantly – their people.

99

Inner Range offers our partners a range of competency-based training courses to ensure the best experience with our products and outcomes for their customers. Additionally, our global support team ensures that any issues are resolved quickly with minimal impact to the end user.

From entry to enterprise, Inner Range provides an end-to-end security solution capable of addressing the most difficult building management needs, providing peace of mind for you and your people.

Our continual investment in research and development puts our products at the forefront of access control, security, video and smart building technology. We partner with best-in-class providers of adjacent technologies such as intercom, payroll, building automation and incorporate the latest in AI technology with solutions for facial recognition, biometrics, number plate recognition and many more. With over 130 native integrations to 3rd party systems and open integration pathways, we provide our customers with a unified system behind a single pane of glass.

SECURING RETAIL BANKING

Brick and mortar banking retailers face an extremely challenging business environment with hyper competition from online retailers and a range of diverse challenges.

- Multi-layered security approach
- Surveillance systems with high-resolution cameras
- Access control systems with biometric authentication
- Robust perimeter barriers
- Trained security personnel and regular patrols
- Collaboration with law enforcement agencies
- Emergency response protocols
- Integration of smart technologies
- Tailored security strategy to address specific vulnerabilities

CENTRALISED MANAGEMENT

PREVENTION OF ROBBERY & THEFT

Inner Range offers a dedicated set of intrusion detection features to assist with the protection of retail banking environments. These features include safety screen control, airlock control, and redundant back-to-base monitoring with Multipath IP.

Access Control features ensure that only authorised staff are permitted in restricted areas, while customers are free to browse in show room areas. Additionally, staff can have access to restricted areas only during time periods where they have a valid reason to enter secured spaces.

PROTECTING STAFF AND CUSTOMERS IN A HIGH-RISK ENVIRONMENT

Retail Banking environments suffer the very real risk of robbery by armed offenders. Inner Range offers fixed and mobile duress solutions, whereby police or security guards can immediately be notified when a dangerous situation occurs. Silent duress options specifically designed for the banking industry are also available. Intruder alarms, duress alarms, and video surveillance can all be accessed from a single user interface to ensure a rapid response to critical situations.

CONTRACTOR MANAGEMENT

Large Retail banking chains require the services of hundreds of independent contractors who require access to retail premises. Inner Range provides a contractor management platform native to our software suite, as well as seamlessly integrating with third-party, dedicated contractor management systems.

These systems ensure contractors are provided temporary access credentials and have complied with onsite health and safety protocols. In addition, contractor invoices can be reconciled with the actual time that contractors spend on site.

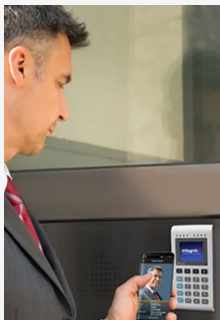

FOCUS ON CUSTOMER EXPERIENCE

Retail bank branches now provide an important differentiator to digital-only banks, with face-to-face interactions providing a unique opportunity to build trust and relationships with customers. Inner Range systems seamlessly integrate with Video Management Systems and Analytics engines that can assist with queue management and meeting room allocation.

Facial recognition systems can also identify VIP customers. Secured spaces are kept safe while still providing an open and frictionless environment to develop relationships with customers.

UNIFIED SOLUTION

Protecting Retail Banks with an Advanced,
Integrated Security Solution.

ACCESS CONTROL

Allowing the approved persons to be in the places that they need to complete their job is critical. But even more critical is preventing unapproved persons from accessing secure areas. This protects the people and assets of the organization and can also reduce other costs such as insurance.

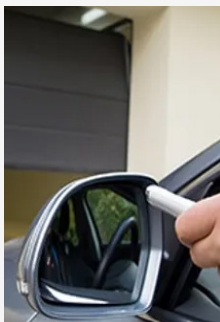

By Integrating with other building systems such as HVAC, lighting, audio, and others provides better physical security and can also reduce the utility costs such as electrical and heating.

INTRUDER DETECTION

Notifying the correct authority of unwanted persons in an area or on a property in an appropriate timeframe helps prevent loss. Escalation of specific events to the correct responder allows them to make better decisions for resolving the issue. Provides up to 14 levels of response to various alarm scenarios.

The events that occur when an intruder attempts to gain access to a controlled area may need to be handled in unique ways. By providing those standard operating procedures for each type of event, responders can mitigate risks and liability.

DURESS ALARMS

Duress alarms are a critical component of Retail Banking environments to ensure the safety and wellbeing of both staff and customers at the premises. It is vital that in duress alarms are reported to a responding authority, facility management and other staff ensuring that appropriate responses are activated.

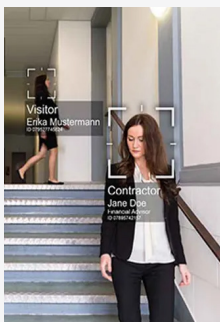

These alarms may be a push button underneath the desk of a teller or a wireless wearable duress alarm transmitter. Regardless of the location of the button, these systems trigger immediate notification of an event to first responders to assist the person in need.

ANALYTICS INTEGRATION

Reducing the time to acquire and interpret information, data analytic technology advances the intelligence of not only the security system but also the building applications. Those systems use their own communication protocols, and Inner Range acts as a data aggregator to normalize that data. By communicating with other systems, the pattern

recognition in the analytics can predict how and when events may occur and trigger efficient use of other resources. If the analytic recognizes trends of attendance, it can help control building lighting resources.

FACIAL RECOGNITION

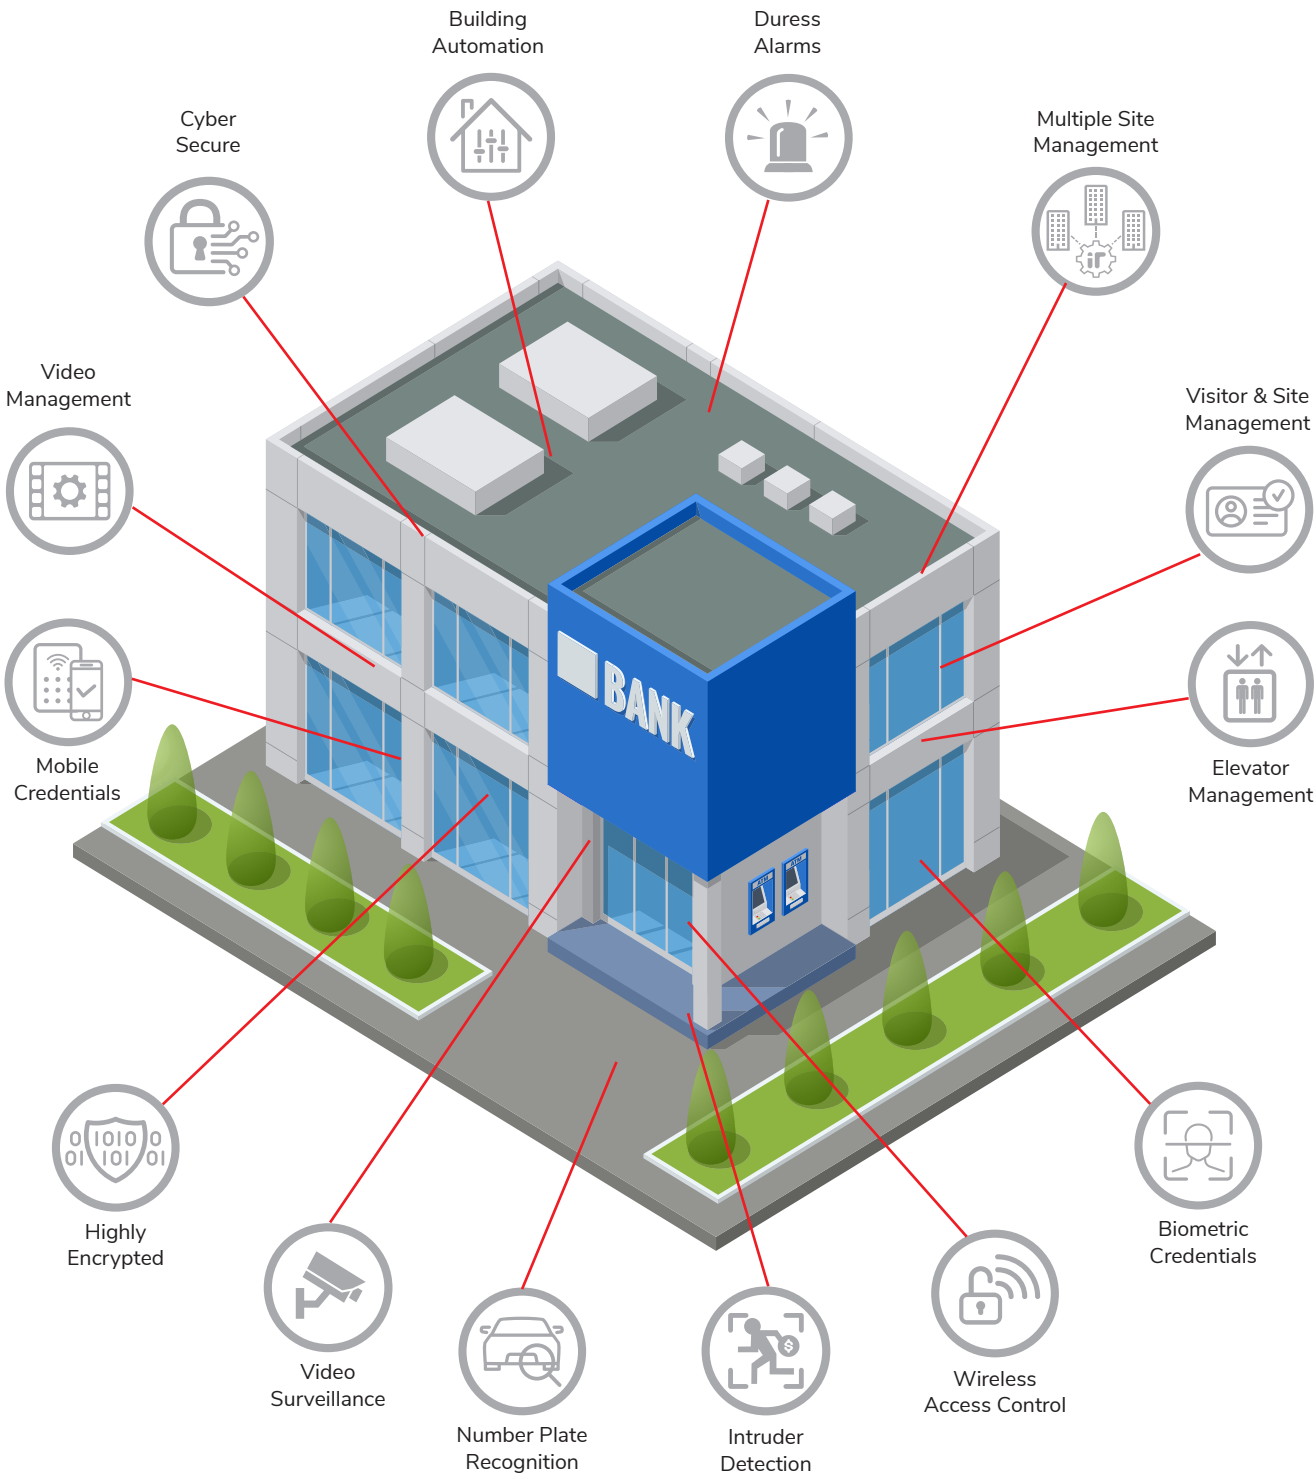

Access to an area is controlled by what you have (card or other physical identification), what you know (code) and who you are (biometric identifier). Integration with a video surveillance system allows the analytics to be integrated with the access control application to provide the Who You Are component of access control.

The identification of an individual through the cameras analytics can be used as the credential to allow a person entrance to a building or area.

VIDEO SURVEILLANCE

Utilising the Video Surveillance Integration platform, system operators can visually verify alarm events in real-time, using video feeds from an interconnected Video Surveillance platform. Security Personnel can view, control and customize Video layouts all within one centrally managed system, while monitoring other access control or alarm events within the same graphical interface.
