

MAXWRAP®

MaxCell® has the industry-leading portfolio of fabric innerduct solutions designed to drastically increase cable density and streamline every aspect of your installation. With over 25 years of experience, MaxCell is a trusted leader in the network construction industry, helping organizations maximize conduit capacity, reduce installation costs, and enable scalable infrastructure.

Our portfolio includes purpose-built solutions tailored to the demanding needs of the industries we serve. Whether it is an airport, military base, construction site, or modern corporate building, MaxCell delivers proven solutions that help you:

- Save and repurpose critical conduit space
- Reduce project costs
- Cut installation time
- Ensure a network that grows with your business

Maximize Conduit Space With MaxWrap

Do you need a more effective, efficient and economical way to pull cables? MaxWrap is your solution.

MaxWrap is an OSP fabric mesh solution that shortens installation time by encompassing the cable as it is being installed and eliminates the need for new duct installation in an overbuild application.

Which industries are the MaxWrap useful in?

- Transportation
- Government and Military
- Utility
- Telecom

What are the benefits of MaxWrap?

- Single-step solution
- Designed for occupied duct systems
- Protective design allows the cables to be pulled farther than traditional applications - especially useful for long and difficult cable deployments
- Strategically engineered to reduce pulling tension on the cable
- Speed up installation with minimal disruption
- Minimizes labor costs
- Avoid delays associated with installing new duct in an overbuild application (boring, trenching, permitting and right-of-way)

MaxWrap's patented fabric design reduces pulling tension on the cable by 85%, allowing for longer pulls. **Successful cable pulls of over 5,000 ft. have been documented.**

Important Installation Tips

- Lubrication is recommended to decrease friction during installation.
- The MaxWrap Applicator and Installation Swivel are essential for successful installation.
- Assessment of conduit fill ratios is recommended prior to any MaxCell and cable installation.
- Designers/installers should make every effort to conform to industry standards (BICSI best practices and ANSI standards) with regard to distances between any two pull points and number of bends, while also adhering to the cable manufacturer's maximum pulling tension specifications.
- On-site technical assistance available for first-time installations. Call your MaxCell® sales representative to schedule assistance.

Design and fabrication of MaxCell is patent protected.
